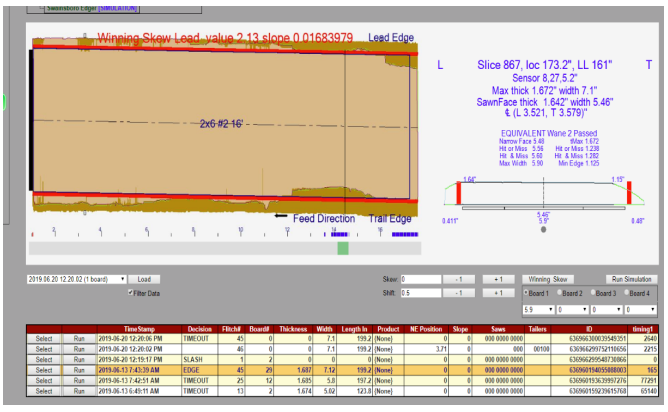
Raptor Integration Inc.

"Advanced Solutions - Proven Results"

FX85 - E

Edger Optimizer

High Accuracy… Low Maintenance



The FX85 supports high density 3D data to create a perfect image of your lumber.

Scan density of .333" or 1" available.

New frame or bolt-on solutions.

The system provides comprehensive reporting and monitoring tools to maximize production and minimize downtime.

The easy to use interface simplifies system setup.

- Exhaustive search beyond the first winning solution
- No limit to skews and shifts beyond edger mechanical constraints and time
- Full trim solutions in saw gaps
- Risk and balance of saws and tailings
- Balance saws and tailers for even wear
- Saw disable
- Customized for various infeed tables
- Edge crush compensation

Support for our systems is a 24/7 commitment, Raptor uses modern remote access tools to assist with tuning and troubleshooting of issues.

FEATURES:

· Grade Book Accuracy – input values directly from the grade book and achieve the results you expect.

· Optimizes each board within the flitch using Raptor's full trim logic to maximize value and eliminate resident boards.

· Comprehensive simulation capabilities.

· WEB based interface for scalability

· Connect via your mobile device to monitor production targets and tune settings from wherever you are.
