

RAPTOR INTEGRATION INC.

“ADVANCED SOLUTIONS - PROVEN RESULTS”

FX85 - SS

Optimized Scan Sort System

Scan and Sort with One Product - High Accuracy... Low Maintenance

Raptor Integration provides scanning and optimization for sawmill trimming solutions. We provide customized algorithms to maximize production and recovery of lumber.

The FX85 supports high density 3D data to create a perfect image of your lumber.

Grading algorithms can be customized and tuned to suit the product rules desired by the customer.

The system provides comprehensive reporting and system monitoring tools to maximize production and minimize downtime.

Real time status alerts that identify and facilitate problem solving during production.

The easy to use interface simplifies system setup and allows for expedited training of operators.

Support for our systems is a 24/7 commitment, Raptor uses modern remote access tools to assist with tuning and troubleshooting of issues.

The FX85 Board Optimizer runs as a stand-alone product or can be integrated with the Raptor WEBSort™ and Controls Program for scanning, sorting, device management and reporting.

FEATURES:

- Grade Book Accuracy – input values directly from the grade book and achieve the results you expect.
- Comprehensive – a solution that optimizes each board and sorts it into the right bin.
- Simplified product set-up and reports for production supervisors.
- Connect via your mobile phone to monitor production targets and tune settings from wherever you are.
